Abstract

Pre-history

Before there was R , there was S .

The S language

Developed at AT&T Bell laboratories by Rick Becker, John Chambers, Doug Dunn, Paul Tukey, Graham Wilkinson.

Version 1	1976–1980	Honeywell GCOS, Fortran-based
Version 2	1980–1988	Unix; Macros, Interface Language
	1981–1986	QPE (Quantitative Programming Environment)
	1984–	General outside licensing; books
Version 3	1988–1998	C-based; S functions and objects
	1991–	Statistical models; informal classes and methods
Version 4	1998	Formal class-method model; connections; large objects
	1991–	Interfaces to Java, Corba?

The “Blue Book” and the “White Book”

Key features of S version 3 outlined in two books:

- Becker, Chambers and Wilks, *The New S Language: A Programming Environment for Statistical Analysis and Graphics* (1988)
 - Functions and objects
- Chambers and Hastie (Eds), *Statistical Models in S* (1992)
 - Data frames, formulae

These books were later used as a prototype for R.

Programming with Data

“We wanted users to be able to begin in an interactive environment, where they did not consciously think of themselves as programming. Then as their needs became clearer and their sophistication increased, they should be able to slide gradually into programming.” – John Chambers, Stages in the Evolution of S

This philosophy was later articulated explicitly in *Programming With Data* (Chambers, 1998) as a kind of mission statement for S

To turn ideas into software, quickly and faithfully

The “Green Book”

Key features of S version 4 were outlined in Chambers, *Programming with Data* (1998).

- S as a programming language
- Introduced formal classes and methods, which were later introduced into R by John Chambers himself.

S-PLUS

- AT&T was a regulated monopoly with limited ability to exploit creations of Bell Labs.
- S source code was supplied for free to universities
- After the break up of AT&T in 1984 it became possible for them to sell S.
- S-PLUS was a commercially available form of S licensed to Statistical Sciences (later Mathsoft, later Insightful) with added features:
 - GUI, survival analysis, non-linear mixed effects, Trellis graphics, ...

The Rise and Fall of S-PLUS

- 1988. Statistical Science releases first version of S-PLUS.
- 1993. Acquires exclusive license to distribute S. Merges with Mathsoft.
- 2001. Changes name to Insightful.
- 2004. Purchases S language for \$2 million.
- 2008. Insightful sold to TIBCO. S-PLUS incorporated into TIBCO Spotfire.

History

How R started, and how it turned into an S clone

The Dawn of R

- Ross Ihaka and Robert Gentleman at the University of Auckland
- An experimental statistical environment
- Scheme interpreter with S-like syntax
 - Replaced scalar type with vector-based types of S
 - Added lazy evaluation of function arguments
- Announced to *s-news* mailing list in August 1993.

A free software project

- June 1995. Martin Maechler (ETH, Zurich) persuades Ross and Robert to release R under GNU Public License (GPL)
- March 1996. Mailing list *r-testers* mailing list
 - Later split into three *r-announce*, *r-help*, and *r-devel*.
- Mid 1997. Creation of *core team* with access to central repository (CVS)
 - Doug Bates, Peter Dalgaard, Robert Gentleman, Kurt Hornik, Ross Ihaka, Friedrich Leisch, Thomas Lumley, Martin Maechler, Paul Murrell, Heiner Schwarte, Luke Tierney
- 1997. Adopted by the GNU Project as “GNU S”.

The draw of S

“Early on, the decision was made to use S-like syntax. Once that decision was made, the move toward being more and more like S has been irresistible”
– Ross Ihaka, *R: Past and Future History* (Interface '98)

R 1.0.0, a complete and stable implementation of S version 3, was released in 2000.

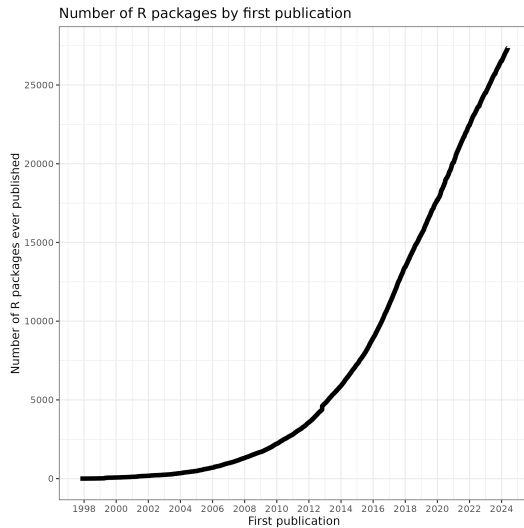

A Souvenir

Packages

- Comprehensive R Archive Network (CRAN) started in 1997
 - Quality assurance tools built into R
 - Increasingly demanding with each new R release
- Recommended packages distributed with R
 - Third-party packages included with R distribution
 - Provide more complete functionality for the R environment
 - Starting with release 1.3.0 (completely integrated in 1.6.0)

Growth of CRAN

Community

- useR! Annual conference
 - Online (2020, 2021, 2022), Salzburg (2024)
- R Journal (<http://journal.r-project.org>)
 - Journal of record, peer-reviewed articles, indexed
 - Journal of Statistical Software (JSS) has many articles dedicated to R packages (<http://jstatsoft.org>)
- Migration to social media
 - Stack Exchange/Overflow, Github, Twitter/X, Mastodon (#rstats)
 - Follow @R_Foundation on X, or @R_Foundation@fosstodon.org on Mastodon

Much important R infrastructure is now in package space

Much important R infrastructure is now in package space

The tidyverse

- Many of the popular packages on CRAN come from the company Posit Software, PBC (formerly R Studio).
- These packages are known as the “tidyverse” (<https://www.tidyverse.org>).
- All packages in the tidyverse have a common design philosophy and work together. Common features are:
 - Non-standard evaluation rules for function calls.
 - Use of the pipe operator `|>` (or `%>%`) to pass data transparently from one function call to another.
- The CRAN meta-package `tidyverse` installs all of these packages.

The R Foundation for Statistical Computing

A non-profit organization working in the public interest, founded in 2002 in order to:

- Provide support for the R project and other innovations in statistical computing.
- Provide a reference point for individuals, institutions or commercial enterprises that want to support or interact with the R development community.

The R Consortium

In 2015, a group of organizations created a consortium to support the R ecosystem.
Current members (May 2024)

R Foundation A statutory member of The R Consortium

Platinum members Biogen, Genentech, Microsoft, Posit

Gold members ASA, Ascent, Esri, Google, GSK, Janssen, Lander Analytics, Merck

Silver members Novo Nordisk, Oracle, Pfizer, Prologia, Sanofi, Swiss Re

Local R User Groups

The R Consortium sponsors local groups.

See <https://www.meetup.com/pro/r-user-groups/>.

R Forwards

- R Forwards is an R Foundation task force to widen the participation of women and other under-represented groups.
- The task force was set up by the R Foundation in December 2015 to address the underrepresentation of women and rebranded in January 2017 to accommodate more under-represented groups such as LGBT, minority ethnic groups, and people with disabilities in the R community.
- See <https://forwards.github.io>

R Ladies

- As a diversity initiative, the mission of R-Ladies is to achieve proportionate representation by encouraging, inspiring, and empowering people of genders currently under-represented in the R community. R-Ladies' primary focus, therefore, is on supporting minority gender R enthusiasts to achieve their programming potential, by building a collaborative global network of R leaders, mentors, learners, and developers to facilitate individual and collective progress worldwide.
- See <https://rladies.org>

R Contribution Working Group

- Initiative to encourage new contributors to R core, with a focus on diversity and inclusion.
- Includes a developer guide aimed at getting new developers on board.
- See <https://contributor.r-project.org>

What does all of this mean for the course?

- R incorporates over 40 years of ideas in statistical computing from multiple contributors.
- There is usually more than one way to do something in R.
- Some of the peculiarities of the R language are there for historical reasons.
- The course does not cover some of the recent additions to the R ecosystem.
